Trauma Informed System of Care Conference

Saturday, May 4, 2019
8:30 a.m. - 4:30 p.m.
John A. Logan College

Providing Trauma Informed Services requires more than a general understanding of adversity. This conference will deepen the level of understanding about adverse childhood experiences, the prevalence of toxic stress and the lifetime consequences violence, abuse, neglect and other adversities can have across generations.

National/international speakers will also discuss trauma informed practices for child welfare, legal and law enforcement, faith communities, schools, foster care, primary care/medical settings, addiction and trauma focused behavioral health treatment.

Using a System of Care Model, this conference will connect a multidisciplinary group of participants to help assess and provide a plan of care for individuals within a trauma informed system of care.

Following the conference, System of Care experts will help drive continued planning efforts for the Illinois Children's Health Care Foundation: Building Compassionate Communities Grant planning team. This conference is in collaboration with the Trauma Based Behavioral Health Fellowship Program.

System of Care Committee Planning Meeting to follow from 5 – 7 p.m.
